On behalf of National Grid, the following summarizes response actions to be performed at the above-referenced site during the timeframe from March 11 to 15, 2013.

SITE ACTIVITIES TO BE PERFORMED

- Complete site observation walk.

The majority of the earthwork associated with the substation upgrades is complete. Minor excavation (associated with electrical conduit) is planned for May 2013. The color-coded alert system indicating when excavation is active (yellow sheet) and not active (blue sheet) will be updated on the bulletin boards prior to the start of the minor excavation work.

GZA will continue to oversee soil management and conduct air monitoring during these earth disturbing activities. Air monitoring will be performed consistent with the summary memorandum which was submitted to RIDEM on September 28, 2012. The remainder of the work associated with the electrical substation upgrade project will consist of aboveground work within the substation and buildings. It is currently anticipated that the aboveground work associated with the substation upgrades will continue until the end of July 2013.

Air monitoring during excavation was performed on March 5 and 6, 2013. No transient or sustained threshold values were noted for either total volatile organic compounds (TVOCs) or dust during the air monitoring this past week. The air monitoring data will be posted on the National Grid website and the site bulletin boards by Monday.

Please contact me at 401-421-4140 Ext. 2719 if you have any questions or comments.
